Africa-China Linkages: Building Deeper and Broader Connections

Abebe Aemro Selassie, Andrea Richter Hume, and Alfred Schipke

Africa's economic and financial linkages with China have played a vital role in the region's growth story. These ties are multifaceted, encompassing trade, foreign direct investment, and financing. The region has made remarkable strides across many development metrics—improving life expectancy, literacy, health, and education.

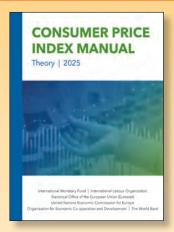

This book delves into the evolving Africa-China economic relationship—which is essential to this growth story. It offers analysis on the role of policy frameworks, capacity building, foreign direct investment, and fintech in promoting sustainable development. It also looks at how connections are bolstered by institutional frameworks like the Forum on China-Africa Cooperation.

With China poised to contribute a quarter of global economic growth over the next five years, it will remain a key player in shaping Africa's economic future. However, the slowing of China's economy will present both challenges and opportunities for African nations. By focusing on this important and evolving driver of growth in Africa, this book complements the IMF's ongoing policy dialogue and support for African countries.

"This book is timely and informative for understanding the nature, potential contributions, and challenges of Africa's development in the context of African countries' cooperation with China. It is a must-read for anyone concerned about Africa's development and China's role in the region."

—**Justin Yifu Lin,** Dean, Institute of New Structural Economics, Peking University.

Macroprudential Policy Survey Online

The global financial crisis highlighted the need for dedicated macroprudential policy tools to safeguard financial stability and mitigate systemic risk.

The Macroprudential Policy Survey is a free and regularly updated database capturing information on the policy tools in use by the IMF's membership. Countries are asked to report measures in line with the general definition of macroprudential policy: "the use of primarily prudential tools to limit systemic risk."

This database features information on the

institutional arrangements supporting macroprudential policy in IMF member countries. The survey information fills an important data gap for researchers and policymakers. It can be used to support research in this emerging area—for example, to assess the impact of measures on credit and asset prices. It will also help policymakers learn about the design of other IMF members' policy measures.
